

NUERS Live API Transaction Test Report

Successful production API insertion and verification for the Business Account integration endpoint

Live site	https://nuers.net
API endpoint tested	POST https://nuers.net/public/api/integrations/transactions
Business Account	Servxbit I.T Solutions
Test date	June 3, 2026, Asia/Manila
Prepared by	Codex API test run
Security note	No API secret, bearer token, or password is included in this report.

Executive result

The live NUERS transaction API accepted a marked production test transaction with HTTP 201. The inserted transaction and generated receipt were both verified through the live merchant APIs. The temporary API key created for the test was revoked and confirmed inactive.

1. Test Scope

The test validated that a Business Account API key with the transactions:write scope can insert a live transaction through the NUERS integration endpoint, and that the resulting transaction and receipt appear through the authenticated merchant APIs.

This was a production test. The record is intentionally marked so it can be found, excluded from analysis, or removed later if required.

2. API Contract Used

Method	POST
URL	https://nuers.net/public/api/integrations/transactions
Authentication	X-NUERS-API-Key header
Required fields used	external_reference, gross_amount, tax_type
Tax setup	vatable, 12 percent VAT rate, VAT inclusive
Temporary key handling	Created for the test, used once, then revoked.

3. Submitted Payload

The following payload was submitted. The API key itself is intentionally omitted.

```
{
  "external_reference": "CODEX-LIVE-API-TEST-B21DF9A8",
  "source_system": "codex_live_api_test",
  "channel": "api_test",
  "transaction_type": "sale",
  "payment_method": "cash",
  "document_type": "sales_invoice",
  "gross_amount": 123.45,
  "tax_type": "vatable",
  "vat_rate": 12,
  "vat_inclusive": true,
  "customer_name": "Codex Live API Test Buyer",
  "customer_tin": "000-000-000-000",
  "branch_code": "MAIN",
  "branch_name": "Main Office",
  "branch_type": "main",
  "items": [
    {
      "description": "Codex live API test item",
      "quantity": 1,
      "unit_price": 123.45
    }
  ]
}
```

4. API Response

Field	Observed value	Result
HTTP status	201 Created	Passed
Duplicate flag	No duplicate response was returned	Passed
Transaction ID	429bd850-0318-437c-9fde-363d63ac6c66	Passed
Receipt number	VI-20260603-WQEBLQC1	Passed

5. Verification Evidence

Verification check	Live endpoint / signal	Observed result
Merchant transaction lookup	/public/api/merchant/transactions?search=CODEX-LIVE-API-TEST-B21DF9A8	1 matching row found
Merchant receipt lookup	/public/api/merchant/receipts?search=VI-20260603-WQEBLQC1	1 matching row found
Temporary API key cleanup	/public/api/merchant/api-keys	Status revoked, active no

6. Security and Cleanup

The full API secret was available only immediately after key creation and was not written into this report. Temporary local response files containing tokens or secrets were deleted after the test.

The temporary live API key was revoked after the transaction was verified. Read-only verification confirmed that its status is revoked and active is no.

7. Operational Notes

Item	Value
Record classification	Production test transaction
External reference	CODEX-LIVE-API-TEST-B21DF9A8
Gross amount	PHP 123.45
Recommended handling	Keep for audit trail, or filter by external_reference/source_system in reports if test records should be excluded.
Code changes required	None for transaction insertion. The live API accepted and persisted the transaction successfully.
